This invention describes a novel oxytocin secretion-regulating agent which contains a ligand peptide or its salt for the G protein-coupled receptor protein. It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before and after expulsion of placenta, uterine recovery failure, caesarean section, stoppage of artificial fertilization or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and pig. This sequence represents a human peptide which acts as an oxytocin secretion

The invention provides a monocional antibody which has a specific reaction with the part peptide of the C-terminal of 19P2 ilyand or its derivative. The antibodies can be used in diagnosis or to treat or prevent diseases associated with abnormality in the pliuitary function regulatory mechanism (e.g. promotion of prolactin secretion), central nervous regulatory mechanism, and pancreatic function regulatory mechanism. The antibody-based immunoassay can also be applied in clarifying the physiological functions of the ligand and its derivative sequences AAY49290-302 represent peptide fragments of the 19P2 ligand.

                                                                                                                       The present sequence describes a method of controlling the secretion of corticotrophin releasing hormone (CRH), involving the use of a G protein receptor ligand. This can be used to control the secretion of CRH and is useful as an analyesic or for treating, preventing or ameliorating diseases associated with CRH secretion such as hyperaldosteronism, hypercortisolaemia, secondary or chronic hypoadrenocorticism, Addison's disease (including boredom, nausea, pigmentation, hypogonadism, hair loss, and hypotension), adrenal gland hypofunction and obesity. The present sequence is a peptide used in the exemplification of the

                                                                                                                                                                                                                                                             The present invention describes a modified therapeutic peptide (I) CC comprising a therapeutically active amino acid region (III) and a cractive group (II) (e.g. succinimidy) and maleimido groups) attached to CC a less therapeutically active amino acid region (IV), which covalently bonds with amino/hydroxyl/thiol groups on blood components to form a peptidase stabilised therapeutic peptide composed of 3-50 amino acids. (I) are useful for modifying therapeutic peptides e.g. hormones, growth factors and neurotransmitters, to protect them from peptidase activity in vivo for the treatment of various disorders. Endogenous therapeutic peptides are not suitable as drug candidates as they require frequent administration due to rapid degradation by peptidases in the body. Modifying and attaching therapeutic peptides to albumin prevents or reduces the action of peptidases to increase length of activity (half life) and specificity as bonding to large molecules decreases intracellular uptake and interference with physiological processes. Abs90829 to Abs92441 represent peptides which can be used in the care

                                                                                                                                                                                                                                                                  This sequence represents a peptide fragment from a novel human type CC ligand polypeptide corresponding to amino acid residues 34 to 54 of the Sequence represented in AN#31390 and is used in an assay to monitor CC ligand binding to the G protein-coupled receptor protein. Pharmaceutical compositions containing this ligand may be used as a pituitary function CC modulator, a central nervous system modulator or a pancreatic function CC modulator. This ligand could have specific applications as a CC prophylactic or therapeutic agent for dementia, depression, hyperkinetic CC syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, CC trauma, growth hormone secretory disease, hyper- and polyphagia, CC hyperlipidaemia, hypercholesterolaemia, hyperglyceridaemia, hypercholesterolaemia, hyperglyceridaemia, province in according the protein partitity, renal disease, CC Turner's syndrome, neurosis, asthma, rheumatoid arthritis, spinal injury, CC acute myocardial infarction, infertility, spinocerebeilar degeneration. CC bone fracture, trauma, atopic dermatitis, osteoporosis and/or CC cligogalactia. Assays can also be developed to screen compounds which are capable of altering the binding activity of the ligand affecting CC activation of the G protein-coupled receptor protein.
                                                                                                                                                                                                   Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                   which contains a ligand peptide or its salt for the G protein coupled receptor protein. It is useful in the form of drugs for ameliocating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before and after expulsion of placenta, uterine recovery failure, caesarean section, stoppage of artificial fertilization or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and pig. This sequence represents a human peptide which acts as an oxytocin secretion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Physiologically active polypeptide recognized as ligand by G protein coupled receptor protein, for promoting secretion of oxytocin, as drugs for diseases relating to oxytocin secretion and in veterinary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; oxytocin secretion promoter; G protein-coupled receptor protein; treatment; disease; pain; atonic bleeding; uterine recovery failure; cocaesarean section; artificial fertilization; galactostasis; goat; pig;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence describes a method of controlling the secretion of corticotrophin releasing hormone (CRH), involving the use of a G protein receptor ligand. This can be used to control the secretion of CRH and is useful as an analysisc or for treating, preventing or meliorating diseases associated with CRH secretion such as hyperaidosteronism,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CC sequence represented in ARV31390 and is used in an assay to monitor CC ligand binding to the G protein coupled receptor protein. Pharmaceutical CC compositions containing this ligand may be used as a pituitary function CC modulator. This ligand could have specific applications as a CC prophylactic or therapeutic agent for dementia, depression, hyperkinetic cc syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, CC trauma, growth hormone secretory disease, hyper- and polyphagia, CC hyperipidaemia, hypercholesterolaemia, hyperglyceridaemia, cc traumar's syndrome, neurosis, asthma, rheumatold arthritis, spinal injury, CC transient brain ischaemia, epilepsy, amylotrophic lateral sclerosis, cc coligogalactia. Assays can also be developed to screen compounds which are CC capable of altering the binding activity of the ligand affecting continued.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query

The present sequence describes a method of controlling the secretion corticotrophin releasing hormone (CRH), involving the use of a G protreceptor ligand. This can be used to control the secretion of CRH and useful as an analysesic or for treating, preventing or ameliorating diseases associated with CRH secretion such as hyperaldosteronism, hypercortisoisemia, secondary or chronic hyposadrencorticism, Addison disease (including boredom, nauses, pigmentation, hypogonadism, hair loss, and hypotension), adrenal gland hypofunction and obesity. The present sequence is a peptide used in the exemplification of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human CRH
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            receptor protein. It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before and after expulsion of placenta, uterine recovery failure, caesarean section, stoppage of artificial fertilization or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and pig. This sequence represents a human peptide which acts as an oxytocin secretion

CC ligand polypeptide corresponding to amino acid residues 23 to 53 of the CC Bequence represented in ARW31390 and is used in an assay to monitor CC ligand binding to the G protein coupled receptor protein. Pharmaceutical CC compositions containing this ligand may be used as a pituitary function CC modulator, a central nervous system modulator or a pancreatic function CC modulator. This ligand could have specific applications as a CC prophylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, trauma, growth hormone secretory disease, hyper-and polyphagia. CC hyperpiplademia, hypercholesterolacmia, hypercidaemia, disease, cancer, pancreatitis, renal disease, phyperpolactinaemia, disease, cancer, pancreatitis, renal disease, cute myocardial infarction, infertiity, spinocerebellar degeneration, cc bone fracture, trauma, atopic dermatitis, osteoporosis and/or capable of aitering the binding activity of the ligand affecting cc activation of the G protein-coupled receptor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SXC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SX
         The present sequence represents a human type igand fragment. It is used in the course of the invention. The specification describes an agent for modulating prolactin secretion which comprises a ligand polypeptide or a salt, for a g protein-coupied receptor (GPCR) protein. The agents for promoting prolactin secretion can be used for treating or preventing hypocovarianism, gonecyst cacogenesis, menopausal syndrome, euthyroid or hypometabolism. They can by used for promoting lactation in a domestic mammal and as an aphrodisiac. The agents for inhibiting prolactin secretion can be used for treating or preventing pituitary adenomatosis, brain tumour, emmeniopathy, autoimmune disease, prolactinoma, infertility, impotence, amenorrhea, galactorrhea, acromegaly, Chiari-Frommel syndrome, Argonz-del Castilo syndrome, robbes-Albright syndrome, lymphoma, Sheehan syndrome or dyszoospermia. The inhibitory agents can also be used as contraceptives. The agents for modulating placental function can be used for treating or preventing characteristics and account of the contraceptives. The agents for modulating placental function can be used for treating or preventing characteristics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         문
This is the amino acid sequence of the human pituitary GC protein-coupled receptor ligand 1992L. A method suitable for commercial high-level production of 1992L comprises expressing the ligand in host cells as a recombinant fusion protein e.g. with location basic fibroblast growth factor (see AAV83796-97) that has composite the ligand is released from the fusion by cyanylation followed by camaonolysis. 1992L has prolactin secretion-stimulating and (at high doses) protactin secretion-inhibiting properties. It can be used in the treatment and prevention of various diseases including: eachle dementia, cerebrovascular dementia, and dementia associated with: genealogical disorders (e.g. Alzheimer's disease, Parkinson's disease, Pick's disease, Huntington's disease, infectious diseases (e.g. treutzfeldt-Jakob's), endocrine or metabolic disease or toxicosis (e.g. brain tumour), traumatic diseases (e.g. chronic consciousness (e.g. brain tumour), traumatic diseases (e.g. chronic consciousness. It is also useful for prevention and treatment of disease associated with prolactin hypo and hypersecretion disease of consciousness. It is also useful for prevention and treatment of consciousness. Infertility, impotence and autoimmune disease (hypersecretion disorders), and seminal vesicle hypoplasia,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                õ
        Pred. No. 1s the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Score

## ALIGNMENTS

prolactin-releasing peptide - rat
C:Species: Rattus norvegicus (Norway rat)
C:Date: 30-Jun-2001 #sequence\_revision 30-Jun-2001 #text\_change 30-Jun-2001

C;Accession: JC7607
R;Yamada, M.; Ozawa, A.; Ishii, S.; Shlbusawa, N.; Hashida, T.; Ishizuka, T.; Hosoya, Blochem, Blophys. Res. Commun. 281, 53-56, 2001
A;Title: Isolation and characterization of the rat prolactin-releasing peptide gene: A;Reference number: JC7607; MUID:21092785; PMID:11178959
A;Accession: JC7607

A; Molecule type: DNA A; Residues: 1-83 < YAM>

A;Cross-references: DDBJ:AB040612; DDBJ:AB040613 C;Comment: This peptide induces arachidonic acid metabolite release from rat anterior release, and stimulation of ACTH secretion from the pituitary.

C;Genetics: A;Gene: PrRP

A; Introns: 33/1

May stimulate lactotrophs directly to secrete PRL.

TISSUE SPECIFICITY: MEDULLA OBLONGATA AND HYPOTHALAMUS.
                                                                                                                                                                                                                                                                                                                   MPAWYAGRG IRPVGRF

BIO1. 148:303-330(1981).

FUNCTION: ENDODEDXYRIBDIUGCLEASE I, WNICN IS EXPRESSED IN THE LATE STAGE, IS NECESSARY FOR T7 GENETIC RECOMBINATION AND THE BREAKDOWN OF HOST DNA. IN THE EARLY STAGE OF INFECTION, T7 DNA REPLICATES AS A LINEAR MONOMER. IN THE LATE STAGE, THE T7 DNA REPLICATES VIA LINEAR CONCATENERS SEVERAL GENORIS IN LENGTH. THE GENE 3 PRODUCT HAS ALSO BEEN IMPLICATED IN THE MATURATION OF THESE CONCATEMERS. CATALYTIC ACTIVITY: Endonucleolytic cleavage to 5'-phosphooligonucleotide end-products.
                                                                                                                                                                                                                                                                                                                                                                                                                                                            ٠

                                                                                                                                                                                                                                                                                                                                                                                                                         FUNCTION: CADHERINS ARE CALCIUM DEPENDENT CELL ADHESION PROTEINS.
THEY PREFERENTIALLY INTERACT WITH THEMSELVES IN A HOMOPHILIC
MANNER IN CONNECTING CELLS: CADHERINS MAY THUS CONTRIBUTE TO THE
SORTING OF HETEROGENEOUS CELL TYPES. N-CADHERIN MAY BE INVOLVED I
NEURONAL RECCONITION MECHANISM.
SUBCELLOLAR LOCATION: Type I membrane protein.
DEVELOPMENTAL STAGE: EXPRESSED AT ALL STAGES OF TESTICULAR
DEVELOPMENT WITH HIGHEST LEVELS FOUND IN TESTES OF 21-DAY-OLD
                                                                                                                                                                                                                                                                                                                                                                         SIMILARITY: CONTAINS
